SUMMARY

Backend-focused Software Engineering student with hands-on experience developing secure, scalable Java Spring Boot applications and RESTful APIs. Skilled in JWT authentication, MySQL, JPA/Hibernate, and backend system design, with experience building AI-powered applications and solving 600+ LeetCode problems. Passionate about backend engineering, distributed systems, and scalable software development.

EDUCATION

Galgotias College of Engineering and Technology

B.Tech – Information Technology | GPA: 7.52

Greater Noida, India

Expected Graduation: 2027

TECHNICAL SKILLS

Languages: Java, Python, C++
Backend: Spring Boot, Spring Security, REST APIs, JWT Authentication
Databases: MySQL, JPA, Hibernate
AI/ML: TensorFlow, Scikit-learn, Pandas, NumPy
Developer Tools: Git, GitHub, Maven, Postman, AWS, Vercel, Render
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems

EXPERIENCE

Java Full Stack Development Intern · Kinetrexa Software Private Limited

Jul 2026 – Aug 2026

- Developed and contributed to real-world software projects as part of a Java Full Stack Development internship, applying backend development and software engineering practices.
- Worked with Java-based application development, RESTful APIs, databases, and full-stack integration to build and improve application functionality.
- Collaborated on project development while following structured coding practices, debugging workflows, and professional software development processes.

PROJECTS

Finance Dashboard | Java, Spring Boot, REST APIs, MySQL, JWT | [GitHub](#) | [Live Demo](#)

Jan 2026 – Aug 2026

- Built a secure personal finance management application using Java, Spring Boot, Spring Security, JWT Authentication, MySQL, and JPA/Hibernate, implementing REST APIs for expense, income, and user management.
- Designed a normalized relational database, integrated role-based authentication, input validation, exception handling, and optimized database operations using Hibernate ORM and lazy loading.
- Developed a scalable backend following layered architecture (ControllerServiceRepository) with clean code practices, enabling easy frontend integration and deployment.

AeroSense Air Quality Prediction | Python, Scikit-learn, Pandas, NumPy | [GitHub](#) | [Live Demo](#) Apr 2026 – May 2026

- Developed a machine learning model to predict Air Quality Index (AQI) using environmental sensor data with feature engineering, preprocessing, and model evaluation.
- Compared multiple supervised learning algorithms including Random Forest, Decision Tree, and Logistic Regression, selecting the best-performing model based on accuracy and validation metrics.
- Built a reusable prediction pipeline with structured outputs that can be integrated into backend applications through REST APIs.

ACHIEVEMENTS & ACTIVITIES

- 700+ LeetCode problems solved** consistent practice in arrays, graphs, dynamic programming, and trees; focused on optimizing time and space complexity.
- Hackathon Participation** successfully submitted a solution to the **ISRO Bharatiya Antariksh Hackathon 2026** and independently designed and developed a project for **HACKHAZARDS '26**.

CERTIFICATIONS

- Tata GenAI Data Analytics Job Simulation (Forage)
- ISRO Bharatiya Antariksh Hackathon 2026
- Walmart Advanced Software Engineering (Forage)
- HackerRank Java (Basic)
- AWS Developer Associate
- HACKHAZARDS '26
- Oracle AI Foundations Associate (Oracle)
